

Joongmin (Michael) Park

Product Designer

Toronto, ON | Authorized to work in Canada | joongmin991114@gmail.com
Portfolio: michaeljpark.github.io/portfolio2026 | LinkedIn: linkedin.com/in/michael-park-design

Product designer and 2026 OCAD University Industrial Design graduate. I run the research, design the interaction and build working prototypes, often in code. Recent projects cover banking, AI data privacy and location-based audio.

Experience

Junior Industrial Designer (Internship), Swave Studios, Toronto Oct 2025 – Dec 2025

- Turned aging-in-place monitoring concepts into UX flows and service blueprints over 8 client sessions, revising the direction through 3 rounds of client review.

Student Designer, Industry Project, OCAD U × Cadillac Fairview, Toronto Sep 2024 – Dec 2024

- Worked on a live brief under a senior mentor and pitched to Cadillac Fairview stakeholders.
- Observed Sherway Gardens on site and interviewed 7 people. The main problems were wayfinding, seating and no reason to visit beyond shopping.
- Designed and prototyped Sherway Stamp: commissioned posters with seating that play a short story when scanned, in six languages for newcomers. The team kept it as the digital layer of its final proposal.

Student Monitor, Production, OCAD U Copy & Print, Toronto 2023 – 2024

Graphic / Proposal Designer, leumgil (HR consulting), Seoul Nov 2022 – Mar 2023

- Designed proposal documents for government bids and sat in on client meetings to gather requirements.

Sergeant, Squad Leader, Republic of Korea Army, Military Police (mandatory service) May 2021 – Nov 2022

Projects

finboard iOS banking app, self-initiated Jul 2026

- Designed a widget-first dashboard that shows students and early-career adults their daily spending without logging in.
- Set the scope from bank-app research (J.D. Power, FCAC) and the incoming Consumer-Driven Banking Act.
- Audited all 8 high-fidelity screens against WCAG 2.2 AA (224 text layers). Found 105 contrast failures and 107 labels under 11 pt, then rebuilt the type scale and hierarchy.

TokenTrust AI data governance, team lead of 5 Mar 2026 – Apr 2026

- Led a 6-week team project on how people could be paid back for the data they give AI tools. Split the research across the team and wrote the synthesis.
- Designed a three-part system (data quality score, token refunds, trust rating for companies) and the app flows.
- Mapped the proposal against PIPEDA and FINTRAC requirements.

OnGen Radio AR audio platform, undergraduate thesis Sep 2025 – Mar 2026

- Designed a location-based radio for AR glasses that pins local posts and AI-generated podcasts to real places.
- Tested the concept with a hands-on MVP and a 22-person survey, then built the prototype as a web app (Python, JavaScript, Firebase) because the target glasses had no developer SDK yet.
- Logged 408 sessions from 147 visitors at GradEx 111, with a median interaction time of 35.6 seconds.
- Finalist, ACIDO Rocket, Association of Chartered Industrial Designers of Ontario (May 2026).

Skills

Design	Figma, Framer, Adobe Illustrator, Photoshop, Premiere, PowerPoint, Excel
Research	Interviews, on-site observation, surveys, usability testing, service blueprints, WCAG 2.2 AA audits
Code	HTML, CSS, JavaScript (AI-assisted), Python, SQL, Firebase
3D	Fusion 360, SolidWorks, KeyShot, Blender

Education

Bachelor of Design (Hons), Industrial Design, OCAD University, Toronto Sep 2020 – May 2026

GPA 3.7 / 4.0. Studies paused 2021–2022 for mandatory military service.
